### Suppressed Vulnerabilities

**[CVE-2022-31160](#)** suppressed

jQuery UI is a curated set of user interface interactions, effects, widgets, and themes built on top of jQuery. Versions prior to 1.13.2 are potentially vulnerable to cross-site scripting. Initializing a

checkboxradio widget on an input enclosed within a label makes that parent label contents considered as the input label. Calling `.checkboxradio("refresh")` on such a widget and the initial HTML contained encoded HTML entities will make them erroneously get decoded. This can lead to potentially executing JavaScript code. The bug has been patched in jQuery UI 1.13.2. To remediate the issue, someone who can change the initial HTML can wrap all the non-input contents of the `label` in a `span`.

CWE-79 Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')

Notes: JavaDoc embedded JQuery UI - requires updated Java Version with newer javadoc

[CVE-2023-26117](#) suppressed

Versions of the package angular from 1.0.0 are vulnerable to Regular Expression Denial of Service (ReDoS) via the \$resource service due to the usage of an insecure regular expression. Exploiting this vulnerability is possible by a large carefully-crafted input, which can result in catastrophic backtracking.

CWE-1333 Inefficient Regular Expression Complexity

Notes: We can not yet update to newer Angular Version

**CVE-2023-26118** suppressed

Versions of the package angular from 1.4.9 are vulnerable to Regular Expression Denial of Service (ReDoS) via the <input type="url"> element due to the usage of an insecure regular expression in the input[url] functionality. Exploiting this vulnerability is possible by a large carefully-crafted input, which can result in catastrophic backtracking.

#### CWE-1333 Inefficient Regular Expression Complexity

Notes: We can not yet update to newer Angular Version

### Suppressed Vulnerabilities

[CVE-2022-25844](#) suppressed

The package angular after 1.7.0 are vulnerable to Regular Expression Denial of Service (ReDoS) by providing a custom locale rule that makes it possible to assign the parameter in `posPre: ' '.repeat()` of `NUMBER_FORMATS.PATTERNS[1].posPre` with a very high value.

**Note:** 1) This package has been deprecated and is no longer maintained. 2) The vulnerable versions are 1.7.0 and higher.

## CVE-2021-4231 (OSSINDEX) suppressed

A vulnerability was found in Angular up to 11.0.4/11.1.0-next.2. It has been classified as problematic. Affected is the handling of comments. The manipulation leads to cross site scripting. It is possible to launch the attack remotely but it might require an authentication first. Upgrading to version 11.0.5 and 11.1.0-next.3 is able to address this issue. The name of the patch is ba8da742e3b243e8f43d4c63aa842b44e14f2b09. It is recommended to upgrade the affected component.

Sonatype's research suggests that this CVE's details differ from those defined at NVD. See <https://ossindex.sonatype.org/vulnerability/CVE-2021-4231> for details

CWE-79 Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')

Notes: We can not yet update to newer Angular Version

## CVE-2023-26116 (OSSINDEX) suppressed

Versions of the package angular from 1.2.21 are vulnerable to Regular Expression Denial of Service (ReDoS) via the angular.copy() utility function due to the usage of an insecure regular expression. Exploiting this vulnerability is possible by a large carefully-crafted input, which can result in catastrophic backtracking.

CWE-1333 Inefficient Regular Expression Complexity

Notes: We can not yet update to newer Angular Version

## CVE-2023-26118 (OSSINDEX) suppressed

Versions of the package angular from 1.4.9 are vulnerable to Regular Expression Denial of Service (ReDoS) via the <input type="url"> element due to the usage of an insecure regular expression in the input[url] functionality. Exploiting this vulnerability is possible by a large carefully-crafted input, which can result in catastrophic backtracking.

Sonatype's research suggests that this CVE's details differ from those defined at NVD. See <https://ossindex.sonatype.org/vulnerability/CVE-2023-26118> for details

[CVE-2023-26118](#) suppressed

Versions of the package angular from 1.4.9 are vulnerable to Regular Expression Denial of Service (ReDoS) via the <input type="url"> element due to the usage of an insecure regular expression in the input[url] functionality. Exploiting this vulnerability is possible by a large carefully-crafted input, which can result in catastrophic backtracking.

## CWE-1333 Inefficient Regular Expression Complexity

Notes: We can not yet update to newer Angular Version

### CVE-2024-6484 (OSSINDEX) suppressed

A vulnerability has been identified in Bootstrap that exposes users to Cross-Site Scripting (XSS) attacks. The issue is present in the carousel component, where the data-slide and data-slide-to attributes can be exploited through the href attribute of an <a> tag due to inadequate sanitization. This vulnerability could potentially enable attackers to execute arbitrary JavaScript within the victim's browser.

Sonatype's research suggests that this CVE's details differ from those defined at NVD. See <https://ossindex.sonatype.org/vulnerability/CVE-2024-6484> for details

### CVE-2024-6485 (OSSINDEX) suppressed

A security vulnerability has been discovered in bootstrap that could enable Cross-Site Scripting (XSS) attacks. The vulnerability is associated with the data-loading-text attribute within the button plugin. This vulnerability can be exploited by injecting malicious JavaScript code into the attribute, which would then be executed when the button's loading state is triggered.

### CVE-2024-38356 (OSSINDEX) suppressed

TinyMCE is an open source rich text editor. A cross-site scripting (XSS) vulnerability was discovered in TinyMCE's content extraction code. When using the `noneditable\_regexp` option, specially crafted HTML attributes containing malicious code were able to be executed when content was extracted from the editor. This vulnerability has been patched in TinyMCE 7.2.0, TinyMCE 6.8.4 and TinyMCE 5.11.0 LTS by ensuring that, when using the `noneditable\_regexp` option, any content within an attribute is properly verified to match the configured regular expression before being added. Users are advised to upgrade. There are no known workarounds for this vulnerability.

Sonatype's research suggests that this CVE's details differ from those defined at NVD. See <https://ossindex.sonatype.org/vulnerability/CVE-2024-38356> for details

CWE-79 Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')

### Evidence

### Suppressed Identifiers

- None

### Suppressed Vulnerabilities

#### CVE-2024-29203 (RETIREJS) suppressed

Notes: Can not update beyond v5 for implementation reasons just now. tinyMCE is primarily used in non-pulbic way.

Unscored:

- Severity: medium
