## Suppressed Vulnerabilities

### [CVE-2022-31160](#) suppressed

jQuery UI is a curated set of user interface interactions, effects, widgets, and themes built on top of jQuery. Versions prior to 1.13.2 are potentially vulnerable to cross-site scripting. Initializing a checkboxradio widget on an input enclosed within a label makes that parent label contents considered as the input label. Calling `.checkboxradio( "refresh" )` on such a widget and the initial HTML contained encoded HTML entities will make them erroneously get decoded. This can lead to potentially executing JavaScript code. The bug has been patched in jQuery UI 1.13.2. To remediate the issue, someone who can change the initial HTML can wrap all the non-input contents of the `label` in a `span`.

CWE-79 Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')

Notes: JavaDoc embedded JQuery UI - requires updated Java Version with newer javadoc

## Evidence

## Suppressed Identifiers

- `cpe:2.3:a:apache:commons_net:2.7:*:*:*:*:*` **suppressed** (*Confidence:Low*)
  - Notes: XML Graphics Common has a false positive match on Apache Commons Net

## Suppressed Vulnerabilities

### [CVE-2021-37533](#) **suppressed**

Prior to Apache Commons Net 3.9.0, Net's FTP client trusts the host from PASV response by default. A malicious server can redirect the Commons Net code to use a different host, but the user has to connect to the malicious server in the first place. This may lead to leakage of information about services running on the private network of the client. The default in version 3.9.0 is now false to ignore such hosts, as cURL does. See <https://issues.apache.org/jira/browse/NET-711>.

CWE-20 Improper Input Validation
